News and updates from HEL Group **Safety and Calorimetry News**

Celebrating 25 years of innovation

HEL 25 year Timeline...

This new edition newsletter includes a celebration of HEL's 25th anniversary. We have grown from a process hazards consultancy to one of the most comprehensive suppliers of tools for process research and safety/calorimetry in the world. We now have offices and clients worldwide and we are currently working to develop a stronger presence in the Middle East, Russia and Brazil. In addition, we are strengthening our applications in the refining and petrochemical sectors while still retaining a leading position in our traditional base in fine chemicals and pharmaceuticals.

On our 25th Anniversary our first system returns

Our origins in safety and calorimetry remain a strong part of our current portfolio, we have a web site dedicated solely to this application area. In addition, we have more recently developed battery testing calorimeters working both adiabatically and in isothermal mode. Our original and first adiabatic calorimeter, the Phi-TEC is still running strong and remains a world leader. In fact the first system we ever sold, 22 years ago, is back for service and upgrade.
